As part of the JARVIS workshop series, the National Institute of Standards and Technology (NIST) is organizing the 4th Quantum Matters in Materials Science (QMMS) ...

There are various forms of batteries, including: lithium-ion, flow, lead acid, sodium, and others designed to meet specific power and duration requirements.

Advanced Materials NIST Additive Manufacturing researches advanced materials, such as biomaterials, composites, and metamaterials. Learn more. NIST studies advanced ...

Scientists from NIST and other institutions have created the first neutron "Airy beam," which has unusual capabilities that ordinary neutron beams do not. This achievement ...

The mantis shrimp packs a powerful punch thanks partly to unique structures in its exoskeleton. NIST researchers have fabricated synthetic versions of these structures and ...

Lithium-ion batteries dominate the market, but other technologies are emerging, including sodium-ion, flow batteries, liquid CO2 storage, a combination of lithium-ion and clean ...

Explore advanced materials for energy storage and conversion, including batteries, supercapacitors, and fuel cells, driving innovation in sustainable energy solutions.

NIST researchers have found special atomic patterns called quasicrystals in 3D-printed aluminum alloys. Quasicrystals increase the strength of 3D-printed aluminum, the ...

Cementitious Materials Our team studies cementitious materials to develop measurement science tools and

standards for additive manufacturing. Learn more. NIST ...

Emerging materials, such as metallic glasses, organic compounds, and nanostructured materials, present transformative opportunities for energy storage applications.

It delves into advanced innovations in energy storage technologies and emphasizes new materials that enhance energy efficiency and performance. We will discuss ...

By synthesizing findings from peer-reviewed literatures this study identifies critical barriers and emerging strategies such as nanostructured materials, hybrid systems, and ...

The new algorithm allows for fine-tuning this relationship to create auxetic materials that behave in ways you couldn't find in nature. "Our research is a beautiful example ...

That's the promise of energy storage power stations--but their success hinges on one critical factor: materials. From lithium-ion batteries to futuristic solid-state tech, the ...

The Materials Measurement Science Division is actively developing new Standard Reference Materials (SRMs) for various materials measurement techniques. For reference, we ...

Emerging materials, such as metallic glasses, organic compounds, and nanostructured materials, present transformative ...
